DETAILED ACTION

Claims 1-15 are being examined in this action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 102(a) as being anticipated by US Patent 2002/0054639 A1 to Kawashima et al.(hereinafter Kawashima) in view of US Patent 2003/0053702 A1 to Hu and further in view of US Patent 6957350 to Demos.

Regarding Claim 1,6,11, 18, Kawashima discloses the quantization scale factor control unit storing the scale adjusting factors where the first scale is greater than the second see Par. 0007-0008; encryption application to receive data and generating of quantized

Application/Control Number: 10/664,438

Art Unit: 2132

by dividing video into first quantization scale see Par. 0012-0013 and encoding using variable length encoding see Fig. 1 item 11. But does not disclose generate supplementary data by subtracting the quantized data multiplied by first scale and generating quantized supplemental data by dividing by second scale & Par. 0102 & and encoding using variable length encoding. However, Hu discloses generate supplementary data by subtracting the quantized data multiplied by first scale see Fig. 1 item 125 and generating quantized supplemental data by dividing by second scale see Fig. 1 item 140. Demos further discloses the encryption see Fig. 13 item 1306. It would be obvious to one having ordinary skill in the art at the time of the invention to include in the invention of include generating of supplemental data in order to have a sample of image as disclosed by Hu see 0023.

Regarding Claim 2, 7,12, Kawashima discloses the MPEG4 standard being used to compress data see Par. 0055

Regarding Claim 4,9, 14, Kawashima discloses the compression using discrete cosine transform(DCT) see Fig. 2 item 22.

Regarding Claim 5, 10,15, Kawashima discloses the use of variable length encoding see Fig. 1item 11.

Regarding Claim 3,8,13, Kawashima does not disclose the compression using motion prediction. However, Hu discloses compression using motion prediction see Fig. 1 item

Application/Control Number: 10/664,438

Art Unit: 2132

.....

185. It would be obvious to one having ordinary skill in the art at the time of the invention to include motion prediction in the invention of Kawashima in order to motion vectors to eliminate redundant instances of data see Par. 0139

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Venkat Perungavoor whose telephone number is 571-272-7213. The examiner can normally be reached on 8:30-5:00. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
